

Ashton N. Holland

US Citizen | Lawrenceville, GA | asstholland@gmail.com | +1 (623) 499-5112

Education

Georgia Institute of Technology | Atlanta, GA

Bachelors of Science in Computer Science | Honors Program

Concentrations: Information Internetworks and Cybersecurity & Privacy

Expected Graduation: May 2026

GPA: 3.70

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Computer Organization & C Programming, Systems and Networks, Algorithm Design and Analysis, Machine Learning, Information Security

Experience

Dell Technologies | Technical Product Management Intern

June - August 2025

Round Rock, TX | Dell Pricing

- Built a full-stack analytics platform (Flask, Polars, WebSocket, Ollama) through the full product lifecycle in agile sprints; engineered an algorithm combining revenue, margin, velocity, and ROI to forecast and rank campaigns across consumer product SKUs.
- Engineered AI-powered natural language processing tool with custom price-elasticity model integration, interactive KPI dashboards, and automated reporting to measure promotional performance, enabling faster, high-impact product decisions and accelerated planning of promotional campaigns by 60%.
- Delivered +\$3M margin impact and cut promos 18% by embedding segmentation insights into FY25 planning; secured adoption through VP- and SVP-level demos and enterprise-wide integration.

Volthost | Software Engineering Intern

May - August 2024

Remote | Startup Focusing on Creating Digital Solutions

- Led the full-stack development and deployment of the client-facing website (vetonthegeaux.com), designing a robust React front-end architecture and Node.js API to directly support the mobile veterinary business model.
- Engineered and launched the critical multi-step appointment system and patient resource portal, integrating with a PostgreSQL database and currently used by an estimated 200+ clients to successfully manage bookings and patient data.
- Deployed a Docker-based email server on AWS EC2, cutting email costs by ~97% and streamlining onboarding.

Georgia Tech Research | Smart Stadium Project

August - January 2024

Machine Learning Subteam

- Built Markov-chain models to identify football plays with >85% accuracy using priors + video features.
- Co-authored section on Markov chain methodology for research paper in *Springer-Nature Computer Science* journal.

Projects

Interactive 3D Personal Portfolio

- Shipped a responsive 3D portfolio (React, Three.js/WebGL, Vite); Vercel-hosted and open-source on GitHub for reuse and refactoring.
- Modular components and organized assets for maintainability and scale.

WanderSync: Collaborative Travel Itinerary

- Android app (Android Studio, Firebase Realtime Database) enabling real-time, multi-user itinerary editing.
- Designed collaborative features & UI with Jetpack; optimized Firebase queries for integrity and scalability.

HazardWise App

- Planned, interviewed stakeholders for, and developed mobile app to predict highest-risk natural disasters at any address
- Created a .NET C# backend to process database and call FEMA APIs & used Swift for frontend and map integration

Skills

Programming: Java, Python, C++, C, C#, SQL, LaTeX, HTML, JavaScript, CSS, React, Swift, Assembly, Three.js, Vite

Technologies: AWS (EC2, S3, Timestream, Lambda, Cognito), Git, Supabase, Firebase, RESTful APIs, Power BI, CI/CD, Jira, Docker, Figma

Languages: English (Native)
